

Enroll a Mac in Mosyle MDM

Purpose

This article will walk you through the simple steps to enroll your Mac in your company Mobile Device Management (MDM) system.

Scope

To complete this process you will need: your Mac, and a network connection (WiFi or Ethernet).

Depending on your company policies, you may experience some changes to your regular workflow. Security policies are enforced through MDM and you may find that your policy prevents auto-login and automatic screen lock when the device is idle. If you have questions about your security policies, please see your GlobalMac IT Point of Contact or [submit a request](#).

Enroll your Device

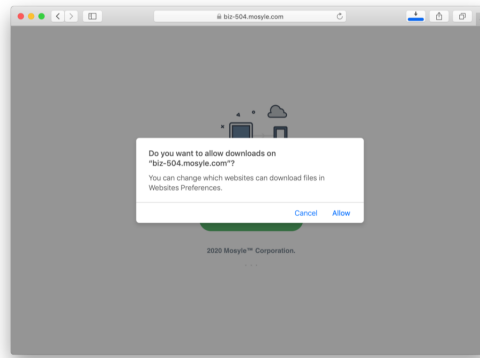

In order to enroll your device in Mosyle MDM, you will need your Enrollment URL. This is a unique web address that begins with <https://join.mosyle.com/>. If you do not have your Enrollment URL please open a ticket with GlobalMac IT requesting one.

1. Open Safari.

- From your Dock, click the Safari icon.

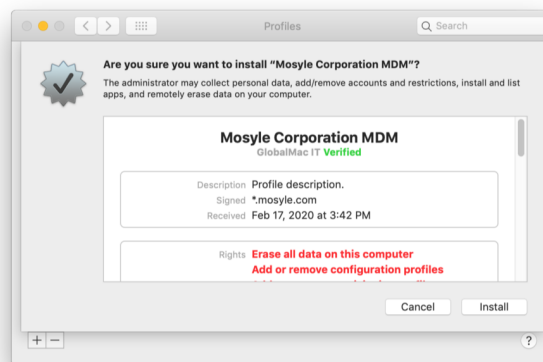

2. Enter your Enrollment URL.

- In Safari, click in the address bar and enter your Enrollment URL. i.e. join.mosyle.com/0x0x00
- Click **return**.
- When prompted to allow the profile download, click **Allow**.
- When the **Profile Downloaded** message is displayed, tap **Close**.

3. Approve installation for profile.

- System Preferences will launch and show an information sheet. Click Install.
- A password box will pop-up. Enter your user account password and click OK

4. Approve Take Control Access Request if you see the pop up in the linked article.

Congratulations! You have successfully enrolled your Mac in Mobile Device Management.

Since you installed the enrollment profile manually, there should not be any additional steps. If you experience a pop-up asking you to approve MDM, follow the on-screen instructions to complete the approval. You can find out more about User Approval in our article [Approve Mobile Device Management for macOS](#).
